Communication

Monitoring

Corporate Performance

Every successful business will require an enterprise wide financial system. Accurate corporate financial performance analysis roll-up from each company, each cost center, each cost of inventory or each profit gained from a customer is important. CCS Enterprise 8.5 will detail every transaction of your business.

CCS Enterprise 8.5 – Inventory module is an integrated system of customer order, purchasing, accounts payable and accounts receivable. Accurate Inventory cost is calculated based on precision 6 digit decimal unit cost. Accurate business cost is recorded by cost center, cash payable and recurring expenses. It is designed to improve all functional processes of a company to achieve steady productivity and business growth.

The frozen food trading business requires **Batch No. Printed against each item in the invoice** so that the Admin. Department can then refer to stock expiry and stock tracing as when it was delivered and sold.

Stock is recorded in **Dual Unit of Measurement**. For example, stock can be sold as per box of 24 packets or in any loose quantity.

The sales, the accounts and the admin are required to work hand-in-hand to each other to fulfill the total business operation. Come and see the Frozen Food Business feature of our CCS Enterprise 8.5 superior inventory and accounting package to streamline your business and achieve a peace of mind financial management of your company.

Combined with the full package are the special functions of **Expiry Date and Consignment**. CCS Enterprise is an ideal package for you.
